QUARTERLY NEWSLETTER

- ✓ Company news
- ✓ Product updates
- ✓ Upcoming events
- ✓ Success stories

Hello ,

We are proud to present an array of compelling company updates, insights, and highlights in our inaugural quarterly newsletter for 2024! In addition to the latest product enhancements, such as NFC support, and the unveiling of our cutting-edge deepfake research project, you will find information about PXL Connect, our exclusive networking event.

You are invited to register for this exciting networking opportunity!

Dive in and stay connected with PXL Vision!

Web-based NFC functionality enhances PXL Ident with superior security and UX

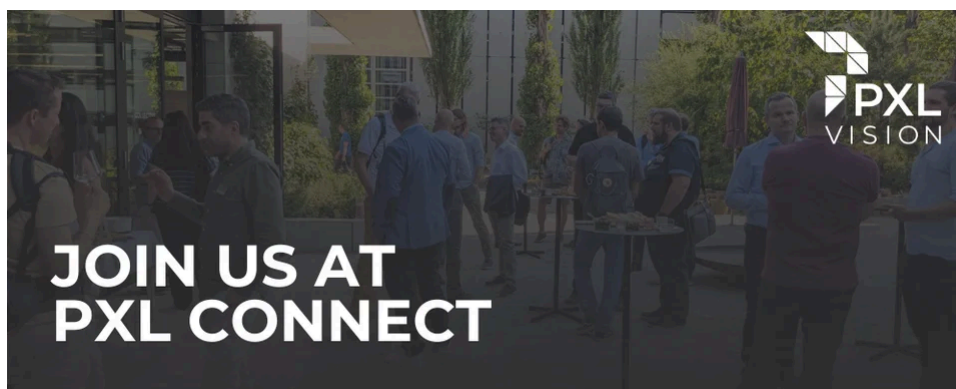

Beginning of the year, we launched a new NFC (Near Field Communication) feature for our web-based PXL Ident solution. This supports seamless verification directly within the web interface, improving the level of security, efficiency and conversion rates. It is particularly suitable for secure business processes such as Swiss bank customer onboarding or the creation of Qualified Electronic Signatures (QES), thanks to its high-security data reading from biometric chips via smartphone. NFC-verification is a simple process and takes only a few seconds.

[Take a look at how it works:](#)

This new feature underlines our commitment to improving security and user experience, and aims to revolutionise identity verification with a focus on simplicity and security.

Connecting Visions, Shaping Futures - Together at PXL [PXL Connect](#)

On April 3rd our event PXL Connect will take place in Zurich. The final agenda and speakers for the PXL Connect have just been announced!

Be among the first to hear about our product roadmap, focusing on the latest developments in Qualified Electronic Signature (QES). Gain outlook on the exciting topics, such as Electronic Identity (eID) and Self-Sovereign Identity (SSI) and learn more about our approach to combating deepfake fraud. Get to know our customers and partners through success stories that demonstrate the tangible impact of our collaborative efforts in digital identity verification.

The event will provide an excellent platform for networking with like-minded people, engaging in meaningful discussions, and connecting with the PXL team, all in a professional setting complemented by Apéro and beverages.

PXL Vision takes measures to combat artificially generated identity fraud

You may have already read about it in the media: A new deepfake detection initiative is being launched in collaboration with the independent Research Institute Idiap to enhance the security of the digital identity market. Our 18-month project, funded by the Swiss innovation agency Innosuisse, aims to address the growing problem of deepfake fraud. We will work together to develop a solution to detect artificially generated identity fraud, which is becoming increasingly prominent in today's digital world.

The press release explains the positive impact of the collaboration on combating fraudulent AI-generated facial images or travel documents and providing a diverse dataset to enhance facial recognition technology.

For more information on the security challenges posed by deepfakes, feel free to read our latest blog post, 'Deepfakes and Identity Theft.'
