

QUARTERLY NEWSLETTER

- ✔ Company news
- ✔ Product updates
- ✔ Upcoming events
- ✔ Success stories

goalHello ,

Welcome to a brand new format from PXL Vision: our quarterly newsletter with all relevant information on current company news and interesting topics in our industry.

Our goal is to keep you up to date regarding

- Product news and updates
- New customers and projects
- Upcoming events

PXL Ident users now can benefit from:

- ✔ Sharper camera focus
- ✔ Easier capture
- ✔ Data-driven device insights

PXL Ident: Implementation of smarter camera options and enhanced Screen Overlays

The ID verification process with PXL Ident is now supported by:

- Sharper Focus, Easier Capture: Introducing a new button on the Manual Capture screen, allowing you to effortlessly switch between available rear cameras for the crispest ID scans. Better image quality and increased automation – just seamless verification!
- Data-Driven Device Insights: We're analyzing initial and used camera data to swiftly identify mobile device type and state, ensuring a smoother experience for all users.
- Screen overlays during ID Scan and Selfie are now more responsive to different screen sizes and resolutions.

PXL Vision's technology is used for electronic health records in Switzerland.

The Swiss electronic health records ePD (Electronic Patient Dossier) process offered by the Swiss Post has officially launched. In order to make this happen, the Post is collaborating with SwissSign, which is supported by our PXL SDK.

From now on, the residents of six Swiss cantons can open an ePD without using any paper-based communication. Our contribution, as a provider of

automated identity verification, is to offer the fastest and smoothest ID verification experience.

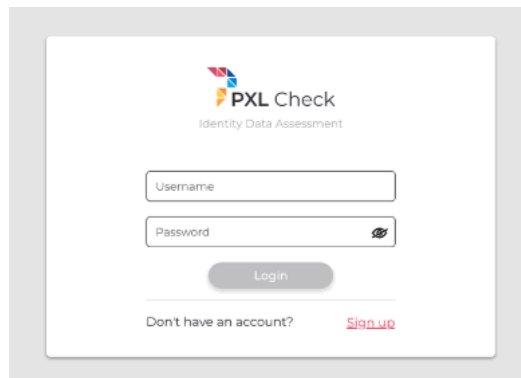

This achievement further underscores our expertise in the realm of identity verification, particularly within the healthcare sector.

More information about the Post's ePD

Have you already heard about PXL Check?

Our add-on tool PXL Check can help to further optimise an already high conversion rate of the ID-verification process.

It enables a simple manual check of negative results as well as a random check of positive results.
